Culture

FOR 33 YEARS, ROCKY MOUNTAIN BICYCLES HAS BEEN DESIGNING, DEVELOPING, AND PERFECTING MOUNTAIN BIKES IN AND AROUND THE NORTH SHORE OF VANCOUVER, BRITISH COLUMBIA. This diverse playground has offered us the ideal proving grounds for all types of riding. Whether you’re looking for the ultimate race machine, an all-mountain bike, or a trusty all-rounder for weekend thrills, we build exceptional bicycles for whatever your riding demands.

THE FOUNDATION OF ANY BICYCLE IS ITS FRAME. At Rocky Mountain we obsess over perfecting frame geometry and optimising suspension to achieve the legendary ride quality we are famous for.

AS RIDERS OURSELVES, WE STRIVE TO BUILD THE BEST BIKES IN THE WORLD. From epic adventures to World Cup racing, our bikes are designed for people who Love the Ride.

Design

A short pedal from the trailhead of Mount Seymour, Rocky Mountain's Development Centre is nestled at the foot of Vancouver's North Shore Mountains. It's here that our engineers take full advantage of our prototype frame shop and testing facility to develop our world renowned bikes. This facility and our proximity to some of the world’s most rugged and versatile riding terrain provides us with a very short product feedback loop - an idea can be born over an early coffee meeting, computer modeled throughout the day, and come out of the CNC machine in time to hit the trails by dusk.

By far the most rewarding part of our R&D team's job is testing their concepts. It's not uncommon to see team riders like Wade Simmons and Thomas Vanderham out on the trails with our engineers, notepads crammed into Camelbaks, as they mount up for yet another loop of such trails as Executioner, Wild Cherry, and Bottletop.

We take pride in our rapid, creative R&D process. It is the cornerstone of our design principles, and vital to making Rocky Mountain Bicycles the innovative and agile company we are today.
SMOOTHWALL™
One of the most sophisticated carbon processes in the world aimed at delivering the best stiffness-to-weight, ride quality, and durability.

- By using a rigid internal mold as opposed to traditional air bladders, SMOOTHWALL™ eliminates any excess resin or fibers, resulting in the stiffest, lightest construction possible.
- Multiple types of carbon placed in specific locations maximize stiffness and impact resistance while minimizing overall weight.

SMOOTHLINK™
Neutral and active suspension for full-time traction, yet supportive for pedaling efficiency.

- Patented design keeps suspension fully active and reduces pedal bob.
- Designed to shine on singletrack climbs, SMOOTHLINK™ stays active-yet-neutral to maintain traction while climbing.
- Fine-tuned end-stroke characteristics prevent riders from blowing through travel and experiencing harsh bottom-outs.

RIDE-9™
9 different configurations put the user in control of their geometry and suspension setup.

- Frame geometry can be changed based on rider preferences and terrain.
- Suspension curve can be tuned to riders’ weight and preferences.
- 9 different configurations, all for precise setup.

ABC™ Pivots
Lighter, more durable and laterally stiffer than conventional bearing systems.

- Our Angular Bushing Concept (ABC™) pivots rotate on a tapered alloy insert, eliminating binding.
- Less than half the weight (320 grams lighter per pivot) and twice as stiff as typical bearing systems.
- ABC™ pivots require less maintenance than conventional bearing systems.

FORM™ Alloy
Not all aluminum tubing is created equal. FORM™ provides the superior ride quality we are known for.

- Each FORM™ tube that we create is engineered for its specific purpose within the frame, ensuring optimized strength, weight, and ride quality.
- FORM™ tube sets utilize premium materials to meet our strict requirements.
Twenty-niner hardtails are generally lauded for their ability to steamroll over trail obstacles, but agility isn’t often a trait they’re associated with. The Vertex, on the other hand, is one of the nimblest 29ers we’ve ridden. – James Huang, BikeRadar

Vertex

XC-RACE HARDTAIL.

The Vertex provides incredible climbing traction and rollover performance delivered on 29” wheels. RTC™ enables the bike to feel agile and confident on all areas of the race course, including technical cornering and descents. With incredible stiffness to weight, the SMOOTHWALL™ Carbon Vertex RSL is the choice for those looking to chase personal bests or do battle on World Cup start lines.
Not all aluminum tubing is created equal. FORM™ provides the superior ride quality we are known for.

SMOOTHWALL™ One of the most sophisticated carbon processes in the world aimed at delivering the best stiffness-to-weight, ride quality, and durability.

RTC™ Technical XC frame geometry gives the rider a unique advantage while keeping a balanced budget that debunks the ``most expensive is always the best'' myth.

One of the most sophisticated carbon processes in the world aimed at delivering the best stiffness-to-weight, ride quality and durability.

Casatto Alloy Not all aluminum tubing is created equal. FORM™ provides the superior ride quality we are known for.

“I was blown away on the first climb, both by the lightness of the carbon frame and the stellar performance of the suspension.”

- Brice Minnigh, Bike Magazine

A lightweight full suspension XC bike, the Element was in a class of its own when we introduced it in 1996. 18 years later, the Element stays true to its racing heritage as a 29er race bike platform. Whether you’re lining up at a start line or heading out the door for an after work hammerfest, the Element’s unmatched ride quality, point-and-shoot stiffness, and traction-tuned suspension will have you waiting for your buddies at the top. The 2014 Element is the fastest, best handling full-suspension XC race bike Rocky Mountain Bicycles has ever made.
FORM™ Alloy
Not all aluminum tubing is created equal. FORM™ provides the superior ride quality we are known for.

ABC™ Pivots
Lighter, more durable and laterally stiffer than conventional bearing systems.

SMOOTHLINK™ Neutral and active suspension for full-time traction, yet supportive for pedaling efficiency.

SMOOTHWALL™ One of the most sophisticated carbon processes in the world aimed at delivering the best stiffness-to-weight, ride quality, and durability.

RTC™ A balanced bottom bracket height gives a smooth carving feel, complimented by a short rear-end to provide lots of maneuverability in technical race courses.

The Thunderbolt is my kind of XC bike. It’s got a natural feel and tackles the climbs exceptionally well. On the descents it provides the kind of small bump sensitivity usually reserved for longer travel bikes.” - Thomas Vanderham

The NEW Thunderbolt is an agile, playful XC bike designed for everyday adventures. With 120mm of travel and 27.5” wheels, the 2014 Thunderbolt is as much about descending flowy singletrack as it is about technical climbing - it’s the perfect bike for when XC gets a little rowdy!

### BC Bike Race

Winding through the towering firs and cedars of BC’s old growth forests, the annual BC Bike Race hosts more than 500 athletes from at least 33 countries. Over the course of seven days they ride under the snow-capped peaks of the Coastal Mountains, down to the lush ferns and vibrant green moss of the most extensive, mature trail network in the world, and tick off another box on the ‘all time’ bucket list. Now going into its seventh year, Rocky Mountain Bicycles continues to support the race - uniting adventurers from around the world to share the passion for mountain biking.

“At last year’s BC Bike Race we ended every day’s adventure crossing the finish line and hunkering down at the Rocky Mountain trailer. As the clan gathered through the afternoon, we would recount the individual stories of tenacity and ultimate adventures shared among all participants. As the week wore on (and body fatigue set in), those evening gatherings became celebrations, knowing that the shared experience is what ties it all together.” – Andreas Hestler

It is this mix of trails, scenery, and camaraderie that establishes our reason for involvement. To the hundreds of volunteers and organizers that give their time and commitment, we thank you!
The Rocky Instinct 970 is a worthy contender for anyone in the market for a bike that they can ride proper trails on all day long. A quick tweak of the geometry and the bike is ready to tackle just about anything. That’s not something you can say of most 29’ers.” — Jonathan Taylor, Revolution MTB Magazine Australia
Instinct

FORM™ Alloy

Not all aluminum tubing is created equal. FORM™ provides the superior ride quality we are known for.

RIDE-9™

9 different configurations put the user in control of their geometry and suspension setup.

ABC™ Pivots

Lighter, more durable and laterally stiffer than conventional bearing systems.

SMOOTHLINK™

Neutral and active suspension for full-time traction, yet supportive for pedaling efficiency.

SMOOTHWALL™

One of the most sophisticated carbon processes in the world aimed at delivering the best stiffness-to-weight, ride quality, and durability.

RTC™

Extreme versatility from XC marathon to Trail domination, thanks to RIDE-9™ for rider-tuned geometry, and cockpit reach that allows riders to tackle rough descents with confidence.

Instinct BC Edition

BC-INSPRIED TRAIL BIKE

We created the Instinct 970 MSL BC Edition to excel on the rugged, technical trails at our doorstep here on Vancouver’s North Shore. We tweaked the spec to better suit our local riding conditions and complemented it with a SMOOTHWALL™ carbon frame. The BC Edition is ready to plow through root-infested terrain and blast our (or your) favourite technical sections with ease.

“...we built the Instinct 970 MSL BC Edition for our own selfish, smashy needs.”

- Ken Perras, Rocky Mountain Product Manager

</table>
Rocky Mountain athletes enjoy traveling all over the world to ride their bikes in unique, beautiful locations. Everywhere they go—from the backcountry of Argentina to the Great Wall of China and countless places in between—they hear people share their dreams of one day riding on our home turf in British Columbia.

That’s why this year Thomas Vanderham, Brett Tippie, Geoff Gulevich, Wade Simmons, and Andreas Hestler decided to reinvigorate their love for home by exploring Vancouver Island, off the coast of British Columbia.

Just a short ferry ride from our North Vancouver headquarters, our trip began on the gorgeous singletrack around Victoria and Sooke. Winding our way up Vancouver Island, we had a great time sampling some of Duncan’s best trails before getting lost on Mount Tzouhalem and descending the wrong side of the mountain by full moon. Then it was off to Tofino to meet Wade Simmons for some surf. Though Wade was nursing an injured wrist, preventing him from riding, the laid back culture of Tofino provided the ideal backdrop for blazing campfires and evenings filled with endless adventure stories.

Further up the island, we found incredible riding in small, idyllic towns that have amazing mountain bike cultures. We concluded our trip in Alert Bay, riding on a small island on the north end of the island. Between the quirky trail networks brimming with potential, the beauty of the many native artifacts, and feasting on fresh seafood around a fire with a group of great local riders, the North Island was easily the most unique area of the trip.

Fuelled by too much coffee in the mornings and too many beers in the evenings, this was a great trip and one that certainly had helped reconnect us all to our roots. There is no question that we will be back to continue exploring the island’s rich trail networks and connect with the many amazing people we met along the way.
“The Altitude is the all-day-long, go anywhere, try anything bike that so many bike brands aspire to create. The Altitude’s component selection, frame numbers, suspension design and wheel size provide just the right tool at just the right moment.” —Richard Cunningham, Pinkbike.com

ENDURO AGGRESSIVE TRAIL BIKE WITH 150MM OF TRAVEL.

Whether you call it Enduro, trail, or all mountain, the Altitude defies simple categorization. The Altitude’s 150mm of SMOOTHLINK™ travel and 27.5” wheels eat up trail features and maximize climbing traction. With innovative features like its RIDE-9™ chip for fine-tuning geometry and suspension, stealth dropper post and internal cable routing to keep things tidy, and SMOOTHWALL™ Carbon on MSL models, the Altitude pushes the envelope of what a modern trail bike is capable of.
Altitude

FORM™

Not all aluminum tubing is created equal. FORM™ provides the superior ride quality we are known for.

RIDE-9™

9 different configurations put the user in control of their geometry and suspension setup.

ABC™ Pivots

Altitude Rally Edition

A RACE READY ENDURO BIKE.

Straight out of the box, Altitude Rally Edition bikes are ready for any Enduro start-gate. Featuring premium race-tuned suspension, DH width bars, and burlier wheels, Rally Edition bikes are ready to put power down between the tape and smash berm after berm.
Slayer

**ALL MOUNTAIN BIKE WITH 165MM OF TRAVEL.**

Proven and reliable, the Slayer is a true All Mountain bike. Whether you’re gearing up for a one-hour descent in the Argentinian backcountry or you’re eyeing up a local sender, the Slayer is up to the task. It climbs like a goat – you gotta get up to get down — and once you’re pointed down its SMOOTHLINK™ suspension handles all the rugged terrain and trail smashing you can throw at it.

---

“The neutral-hanging front end and uber-stiff frame let you bomb through seriously hacked out terrain.” - Vernon Felton, Bike Magazine

BET™

High speed stability in the gravest of terrain thanks to a lockout feature in the rear shock and an arching lower link that reduces unwanted flex and bob for a true all mountain ride.

SMOOTHLINK™

Neutral and active suspension for full-time traction, yet supportive for pedaling efficiency.

RTC™

High speed stability in the gnarliest of terrain thanks to a slack heattube angle and seamless flow in and out of turns from a low bottom bracket height come together to create a true all mountain ride.

FORM™ Alloy

Not all aluminum tubing is created equal. FORM™ provides the superior ride quality we are known for.
In developing the Slayer SS, Team riders Geoff Gulevich and Jordie Lunn worked closely with our R&D department — obsessing over the geometry, shaving unnecessary weight, and testing a variety of designs — to deliver what we believe is the best slopestyle package available. The Slayer SS has a progressive suspension curve that is as comfortable cruising through your local dirt-jump set as it is cork-flipping the cabin stepdown at Crankworx.

"Waiting at the start gate before your run at the Red Bull Joyride during Crankworx is always nerve-wracking. With all the focus required to pull out big tricks, it’s nice to know my Slayer SS is tough as nails, feels great, and is ready to drop in.”

— Geoff Gulevich

Whether he’s eyeing up a frontflip or just heading out for a quick pumptrack session, Geoff Gulevich’s Flow is up to the task. RTC™ geometry keeps the bike stable-yet-playful, and the carefully considered parts spec delivers amazing value. The seriously tough chromoly frame is sturdy and built to endure years of good times.

**RTC™**

A longer rear end provides increased stability and control off the lip of dirt jumps, while low bottom bracket allows for quicker cornering on the pump track.

The Flatline Park is our rental bike of choice for the Whistler Bike Park. It gives our customers the quality ride experience they want, while providing us the durability we require." – Summit Sport, Whistler, BC

There is nothing quite like the feeling after a good day of smashing laps at the bike park. With Whistler only 1.5 hours away from our Development Centre, we built the 2014 Flatline Park tough, reliable, and with great suspension performance. The Flatline is a proven contender that will surely have you collecting vertical miles at your local bike park.
